

ABSTRACT OF THE DISCLOSURE

- A Y-shaped tool comprises a central member a ratchet based coupling having a square or hexagonal section projected from a bottom, the coupling being adapted to connect to a member having a tip of screwdriver, and connect
- 5 to a mated slot at one end of a coupling sleeve which has the other end adapted to put on a fastener, and three peripheral slots each having a square section; and three removable handles each including a coupling member having a square section at one end and a sleeve tip at the other end adapted to put on a fastener. The coupling member is insertable into the mated slot to be fastened.
- 10 One of the handles is replaceable by a shank having one end insertable into the mated slot for fastening and the other end shaped as a tip of screwdriver or the like.
